

Redesigned Vertical

Finished with **ArcClad™**
Superior Aboveground Coating

Tank Features:

- Taller collar to accommodate preferred regulator set-ups.
- Larger collar cut outs for easier access.
- Finished with TRIARCTANK ArcClad™ aboveground coating, an advanced single-cure primer and topcoat.

Redesigned Vertical

Cre: December 14, 2018

- A primer and topcoat system produces a superior coating that is more durable and resistant to the elements while providing enhanced edge protection compared to a conventional single-coat.

- Conventional primer and topcoat systems require a cure between the primer and topcoat applications; often at a different cure profile.

- Conventional primer and topcoat systems provide the advantages of a two coat system, but can't be done economically in most applications.

- ArcClad, Super Durable Topcoat with Zinc Rich Primer, provides an even stronger bond than a conventional two coat system at an economical cost.

- ArcClad is an advanced single-cure primer and topcoat.

- ArcClad is TRIARCTANK standard above ground coating.

- ArcClad offers all of the advantages of a two coat system, enhanced by the co-reaction and cross-linking of the cure process, forming a superior aboveground tank coating.
