Important Guidelines for Tank Acceptance

Please be aware that TRIARC does not accept tanks containing LPG or any other materials. Ensure all tanks are completely empty prior to pick up.

Tanks manufactured before 1970, or those with valve or gauge styles that are no longer in production, will be rejected unless prior approval for refurbishment is obtained from TRIARC.

Tanks that do not meet NBIC requirements will be rejected. This includes tanks with large dents or bulges, gouges, excessive pitting, cracks, or leaks. Tanks with an illegible or missing nameplate, or those that have been used for Anhydrous Ammonia, will also be rejected.
